

SACS Required Action 8

Executive Summary: Technology Audit (Part I)

Purpose of Technology Audit

The purpose of the technology audit is to inventory the technology and related resources currently available to the teachers and students of the DeKalb County School District (DCSD).

Information for the technology audit was gathered from the following data sources:

- DCSD 2012 13 Annual Technology Inventory
- DCSD Technology Project List
- DCSD 2012 15 District Technology Plan
- DCSD Instructional Software List (Widely-Used Applications)

In order to provide a complete picture of the technology resources available in DCSD, this report categorizes and summarizes the data into the following categories:

- Hardware
- Software
- Network and Infrastructure
- Technology Projects
- Technology Plan
- Operations and Support

The aim of this report is to assist various departments within the school district in making strategic and data-driven decisions to ensure the effective use of technology in instruction.

Hardware

Desktop and Notebook Computers

The district is engaged in an aggressive program to provide teachers with the modern computing devices and peripherals needed to teach in the 21st Century. These devices include desktop computers, notebook computers, tablet computers, interactive whiteboards, student response devices and document cameras.

There was a major effort during 2008 - 2010 to provide modern desktop computers for teachers and students in the classroom. As a result, all teachers were assigned an industry standard desktop or notebook computer running the Windows 7 operating system and current productivity software. To date, eighty percent (80%) of all computers used for instruction are less than 5 years old.

Tablet Computers

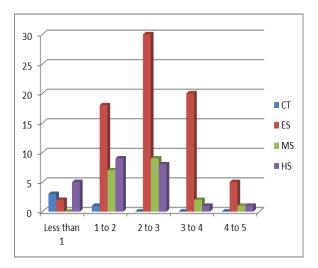

Tablet computers are a recent addition to the technology arsenal available to teachers and students. When combining tablet devices with existing notebook computers on inventory to date, thirty-one percent (31%) of all instructional computing devices are wireless capable. Ninety-six percent (96%) of these devices are less than 5 years old.

Interactive Whiteboards and Student Response Devices

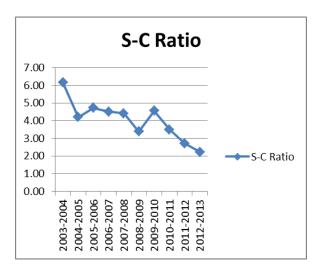

At the start of 2008, there were a handful of interactive whiteboards (IAB) installed throughout the district. Today, sixty-four percent (64%) of classrooms are equipped with IABs. One fourth of these classrooms also have document cameras which is about sixteen percent (16%) of all classrooms. In addition, the district has deployed over 46,000 student response devices for use with the IAB software. Special-Purpose Local-Option Sales Tax (SPLOST IV) will fund the 21st Century Classroom Project, which will install an IAB in all remaining classrooms. Consequently, one hundred percent (100%) of district classrooms will be equipped with an IAB by the end of the 2013 – 14 school year.

By continuing to make technology available to teachers in the classroom, the DeKalb County School District has been able to reduce the number of students per instructional computing device to 2.22:1. The ratio of students to wireless capable devices is 7.16:1.

Student to Computing Device Ratio by School Type

Student to Computing Device Ratio Over Time

Virtual Desktop Computing

Looking to the future, the DCSD Information Technology (IT) Department is working to extend the life of aging desktop computers. Another SPLOST IV funded project will create a virtual desktop environment for workstations that are older than two years. This virtual desktop environment will allow users to run the latest Windows operating system and productivity software without having to replace the actual computer.

Data Source

Detailed data from the 2012 – 2013 Annual Technology Inventory for DCSD can be found in Appendices 1A and 1B.

Software

Productivity

All workstations purchased from a DCSD Board-approved vendor come preinstalled with Windows 7, Internet Explorer 9 and the Microsoft Office 2010 Professional Suite. The Microsoft Office 2010 Professional Suite includes a word processor (Word), spreadsheet (Excel), presentation tool (PowerPoint), database (Access), and organization and collaboration tool (OneNote).

Email and Communication

DCSD adopted FirstClass as the district's email and communication tool. Every DCSD staff member and all students in grades 5 through 12 have FirstClass accounts. In addition to email, each staff member's FirstClass account supports file storage and sharing, district and school level conferencing, real-time chatting, as well as individual webpage hosting.

Administrative

DCSD has adopted several web-based applications necessary for administrative functions typically conducted by the teacher that impact instruction. The electronic Student Information System (eSIS) Teacher Assistant is the teacher's electronic grade book that works seamlessly with the Student Information System currently used by the district. The district's Instructional Data Management System provides teachers with access to school and student data, including benchmark and standardized assessment results.

Instructional Applications

Instructional software applications support both local school and district-level initiatives and programs. District-wide software application licenses are typically funded by local funds and are available for use in all schools and centers at appropriate grade levels.

All other instructional software application licenses are available as resources to schools and centers based on specific instructional needs as identified by a particular program or initiative. These software applications are funded, as appropriate, using federal, state, and local funds.

Data Source

Detailed data for software applications widely used in DCSD can be found in Appendix 1C.

Executive Summary

Network and Infrastructure

Fiber-Optic Wide Area Network

Since 1997, one hundred percent (100%) of classrooms within the DeKalb County School District have had connectivity to the network and the Internet. In 2002, DCSD decided to use SPLOST II funds to greatly enhance the connectivity between the schools and the Internet. By 2006, DCSD had migrated from a leased frame relay wide area network (WAN) to a wholly owned fiber optic based wide area network (WAN). This major network upgrade made network connection speeds 600 times faster and Internet access speeds 14 times faster.

Industry-Standard Data Center

The DCSD Wide-Area Network (WAN) is organized into three central sites and 16 school (head end) sites that are connected at 10 Gbps bandwidth. Each school's local area network has a 1 Gbps bandwidth connection to a head end. The DCSD WAN supports all instructional and business applications which include, but are not limited to, Internet, VoIP, video, and wireless. Security components prevent unauthorized access to the network.

Our three central sites hold all of the district level instructional and business applications: the main site being a fully-functional industry-level data center located at the district's technology center. This data center provides clean power and a robust HVAC system to protect the district's significant investments. In addition, using virtualization software, the district has reduced the number of physical file servers from 450 devices to approximately 120 devices.

Wireless Connectivity

Wireless connectivity is available in the Media Center of every school and center within DCSD. Approximately 20% of schools and centers are fully wireless. Additionally, every new school will have wireless access both inside and outside of the building. The wireless infrastructure is robust enough to allow for future wireless growth. SPLOST IV will also fund the Wireless Access for all Schools Project which will provide site-wide wireless access to one hundred percent (100%) of the schools and centers within DCSD. This project is in progress and scheduled for completion late 2013.

Technology Projects

The projects displayed in the technology projects list (see the Appendix) give a view of projects throughout the district that are currently in the queue for procurement and/or implementation or are already in implementation. These projects are categorized as large or district-wide efforts that will have a major impact on a significant amount of the population, especially the students. This information is not only another artifact for the technology audit, but also supports another milestone for Required Action 8 in addressing the allocation of technology. The scope for each project gives a brief description of what schools or programs will be affected by the initiative, what technology hardware and/or instructional software will be provided, and for what purpose. Also, indicated in the table are project the (tentative) start and end dates, the current status of the project displayed with a percent of completion, and the department that owns the project.

Data Source

Detailed data for the Technology Project List can be found in Appendix 1D.

DeKalb County School District Technology Plan

Purpose

Every three years the Georgia Department of Education (GADOE) mandates the requirement of a current technology plan. The latest plan, 2012 – 2015, was submitted to and approved by the DeKalb County School District's (DCSD's) Board of Education (BOE) in April 2012. It is a requirement by the GADOE that the district's BOE approve the technology plan prior to submitting it to GADOE.

There are several reasons a current technology plan is needed by every school district in the state of Georgia:

- 1. To ensure that the district is being a good steward in the use of federal, state and local education technology funds to support student achievement.
- 2. To maintain eligibility for e-Rate, Title II-D formula and Competitive grant funding.
- 3. To review the current reality of the district's students, teachers and administrative staff access to and use of technology.
- 4. To compare the previous three-year plan to the current reality in order to determine where are gaps.
- 5. To create goals and benchmarks for the next three years in order to close the gaps and move the district's students, teachers and administrative staff forward in access to and use of technology.

Development Process

The planning of the district technology plan was a collaborative effort by the various departments (and team members) within the district. There were three major groups involved in the development of the document. Each had its own set of roles and responsibilities.

1. **Core Team** – responsible for planning and organizing who should be involved in the creation of the plan, what information should be included in the plan, how the information should be organized; reviewing all documentation before submitting to the BOE and before publishing on the website; and facilitating all stakeholder meetings and community forums. This group consisted of Information Technology (IT) senior management and key members from each department within IT. Those departments were: Project Management, Instructional

Technology, Technical Support Services, Enterprise Systems, Infrastructure & Security, Student Information Systems, and Applications Development & Support.

- Stakeholders responsible for providing information on how they view current technology in district, especially in their work areas (if applicable) and where they see technology needs in four basic areas:
 - a. Admin/Classroom Technology
 - b. Infrastructure
 - c. Instructional Technology
 - d. Business Applications

This group consisted of members in Information Technology, Human Resources, Curriculum & Instruction, Finance, Education Media, principals, teachers, parents, and community members. Meetings with these stakeholder groups occurred within a four-week period.

3. **Writing Team** – responsible for compiling and analyzing all data gathered and forming it into a document with all information based on the guidelines provided by the state department. This group consisted of a sub-group within the core team.

Approval Process

The technology plan was approved according to the process below.

- 1. March 30, 2012 Plan was finalized
- 2. April 9, 2012 Presented and approved by the DeKalb BOE
- 3. April 20, 2012 Submitted to the GADOE
- 4. April 27, 2012 Received approval letter from the GADOE
- 5. July 6, 2012 Placed on the district's website

Data Source

Detailed DCSD 2012 – 15 Technology Plan can be found in Appendix 1E.

Operations and Support

The Department of Information Technology (IT) is responsible for instructional technology, business and administrative data processing systems, network management and technology support services for DCSD. Our technology program is based upon the premise of maintaining a balance among hardware, software and people. Our strategy has been to prepare teachers to use instructional software with students, to prepare administrators as well as teachers to use application, tool and support software as appropriate and to apply current information technology to the business processes of DCSD in a distributed environment. This strategy supports the major goals of DCSD to improve student achievement and support the teaching and learning process.

Currently, the IT Department divided into the following divisions:

- Application Development and Support
- Digital Programming
- Enterprise Systems
- Information Systems
- Instructional Technology
- Information Security
- Project Management
- Support Services
- Technical & Support

Technology troubleshooting is provided by various support personnel within the IT Department. The primary avenue for problem resolution is the DCSD Support Services Call Center. The Call Center utilizes a help desk call management system to provide first and second level support to every school and center. Technology issues that require more specialized assistance are directed to the appropriate department to ensure resolution.

The Instructional Technology (ITS) department provides training and assistance to our learning communities as they leverage the use of technology to support the teaching and learning process. ITS designs and provides targeted professional development that models and promotes the National Educational Technology Standards endorsed by the International Society of Technology in Education and adopted by the Georgia Department of Education.

Information Technology works in tandem with other departments, vendors, and service providers to provide high-quality solutions to internal and external customers that are research-based and data-driven.

License/Availability Defintions

- School License: Requests and funding for this application is determined by individual local schools.
- **District License (All):** Application is funded at the district level and available to **all** DCSD schools and centers
- **Department License (Special Education):** Application is available to all DCSD schools and centers special education system.

IMPORTANT:

This is a snapshot of instructional software widely-used in DCSD. As we gather more information, this list is subject to change.

District's Technology Projects
